

A3: offsets off

POST

PRE

A2: gate

probes (support masks)

none	footprint	mass
F-FCM (mass-weighted averaging)	gate of GF-PFedFCM, no offsets	
lossless rule at $L = 1$ up to β_p, α_s		pre_mass_off, weight $\beta_p \bar{M}_{pj}^2 / \max_{\ell} \bar{M}_{p\ell}$

footprint mask	mass mask

A3: offsets on

POST

PRE

	GF-PFedFCM	

 coincides with an existing method

 focus of the analysis

 probe gate (not a candidate rule)

Outside the space (external baselines): SC-FFCM (gradient steps, control variates); Pedrycz's gradient F-FCM (POST mass inside the gradient); avg2 (k -means of the local centres); size-weighted averaging of the local centres (FedNova-type).
